SUPERFUND SITE INVESTIGATION

I have reviewed the attached 6H/Site Assessment section report on the SSI conducted for the above-referenced site. Based on the description of the concentrations for the detected organics and inorganics, the Emergency Response Branch would not conduct a removal action at this site. All concentrations are well below any reasonable action level that historically has been used for similar contaminants.

Therefore, I recommend that this site be closed from the 6E-E files and no further action be taken unless conditions or information pertaining to this site change such that a site assessment is warranted.
